

Weatherwell Shutters

Product care for aluminium exterior shutters

CLEANING

Help maintain the premium appearance of your Weatherwell aluminium shutters with a thorough clean once every six months. Simply hose down, or use a nonabrasive cloth or sponge with warm soapy water. Particular attention should be paid to stainless steel hardware – especially in coastal areas. If your property is directly on the beachfront, weekly cleaning is recommended.

PROTECTION

Cleaning products with an alcohol-based solution may tarnish your shutters' powder coat finish and are best avoided. We recommend using warm soapy water. It is also advisable that any salt residue or tannin stains from trees are removed on a regular basis.

TENSIONING

If required, the drive blade tension can be adjusted. To do so, use a Phillips head screwdriver to gently rotate clockwise until the blade has enough tension to enable all the blades to maintain their position. Take care not to over-tension the drive blade as it is not covered by warranty.

RECOMMENDED COASTAL CLEANING SCHEDULE

CORROSION POTENTIAL	DISTANCE TO SALT-WATER	CLEANING SCHEDULE
Low	20km radius	Every 6 months
Moderate	10km radius	Every 3 months
High	1km radius	Every 3 weeks
Extreme	500m radius	Every week
